Texas Statute on Sexual Assau

Objectives:

- Define Sexual Contact
- Define Sexual Intercourse
- Identify What Constitutes Sexual Assault

Texas Statute on Sexual Assau

Objectives:

- Explain Penalties of Sexual Assault
- Clarify Statute of Limitation
- Statistics and Safety Tips
- Become Familiar with Sexually Transmitted Diseases

SEXUAL CONTACT

Sexual Contact:

Any touching of the anus, breast, or any part of genitalia of another person with intent to arouse or gratify the sexual desire

SEXUAL INTERCOURSE

Sexual Intercourse:

Any penetration of the female sex organ by the male sex organ

SEXUAL ASSAULT

Intentionally or Knowingly:

(1) Causes the penetration of the anus or sexual organ of another person by any means, without that person’s consent

SEXUAL ASSAULT

Intentionally or Knowingly:

(2) Causes the penetration of the mouth of another person by the sexual organ without the person’s consent

SEXUAL ASSAULT

Intentionally or Knowingly:

(3) Causes the sexual organ of another person without the person's consent, to contact or penetrate the mouth, anus, or sexual organ of another person

SEXUAL ASSAULT

Intentionally or Knowingly:

(4) The other person has not consented and the perpetrator knows the other person is unconscious or physically unable to resist.

SEXUAL ASSAULT

Intentionally or Knowingly:

(5) Threatening to use force or violence

Penalties of Sexual Assa

A sexual assault offense is a

FELONY

of the second degree.

The penalty for sexual assault is 2 - 20 years in a state jail facility and/or $10,000.00 in fines, or both.

STATUTE OF LIMITATION

As of 2001, the new law states:

There is **NO** statute of limitation for a sexual assault if evidence is collected at the time of the assault.

STATISTICS

- One woman is sexually assaulted every 2 minutes in the USA

- Over 80% of all sexual assaults are committed by somebody the victim knows

- Less than 4% of sexual assaults are committed by strangers

STATISTICS

- More than 50% of acquaintance sexual assault involves **ALCOHOL**

- Sexual assault is not about sex; it is about control and power

SAFETY TIPS

- Stay with a group of friends
- Have a communication plan
- Park in a lighted area

SAFETY TIPS

- Be aware of what's happening at all times
- Don't leave your drink unattended.
- Don't let a stranger buy you a drink.
- If you are being assaulted, do what you need to do to survive, then call 911 immediately

VARIOUS SEXUALLY TRANSMITTED DISEASES

Warning: Graphic material follows

PUBIC LICE

- Pubic lice (*Phthirus pubis*, or the crab louse) infests areas of the body where hair grows, especially the groin.
- Most common in adolescents and young adults.
- It has been of epidemic proportions across all age and socio-economic class groups since the 1960s.

PUBIC LICE

SCABIES

- Scabies is a contagious, itchy skin condition.

- It is caused by very small, wingless insects or mites called the Human Itch mite or Scabies itch mite.

- *Sarcoptes scabiei var. hominis* (Hering), a tiny insect just visible to the eye (about 0.4mm) and is a tiny, eight-legged creature

SCABIES

GENITAL HERPES

- Genital herpes is a sexually transmitted disease.
- Most individuals have no or only minimal signs or symptoms.
- Appear as one or more blisters on or around the genitals.
- Blisters break, leaving tender ulcers.
- Another outbreak can appear weeks or months after the first.

GENITAL HERPES

GENITAL WARTS

- Genital warts are caused by a virus called the Human Papilloma Virus.

- The warts can be removed, but the virus will remain in the body.

- It is very common for the warts to reappear after removal.

- This disease is spread by contact with the wart, but often the warts can not be seen.

- Genital warts can have very different

GENITAL WARTS

GONORRHEA

- Gonorrhea is a common sexually transmitted disease.

- Gonorrhea is caused by a bacterium that can grow and multiply easily in the warm, moist areas of the reproductive tract, including the cervix (opening to the womb), uterus (womb), and fallopian tubes (egg canals) in women, and in the urethra (urine canal) in women and men.

- The bacterium can also grow in the mouth, throat, eyes, and anus.

GONORRHEA

CHLAMYDIA

- Chlamydia is a common sexually transmitted disease, which can damage a woman's reproductive organs.

- Even though symptoms of chlamydia are usually mild or absent, serious complications that cause irreversible damage, including infertility, can occur "silently" before a woman ever recognizes a problem.

- Chlamydia also can cause discharge from the penis of an infected man.

CHLAMYDIA

SYPHILIS

- Syphilis is a sexually transmitted disease caused by the bacterium *Treponema pallidum*.

- It has often been called “the great imitator” because so many of the signs and symptoms are indistinguishable from those of other diseases.

SYPHILIS

CHANCROID

- Chancroid is a bacterial disease causing painful, irregularly shaped sores.
- It is a localized infection which can be treated and cured and has no long-term effects.
- *Haemophilus ducreyi* (a small gram-negative rod organism) which occurs mainly in developing countries, especially the African, Asian and Latin American nations.

CHANCROID

BACTERIAL VAGINOSIS

- Bacterial vaginosis (BV) is the most common infection in women of childbearing age.

- Women with BV may have an abnormal discharge with an unpleasant odor.

- Discharge is usually white or gray.

- Women with BV may have burning during urination or itching around the outside of the vagina, or both.

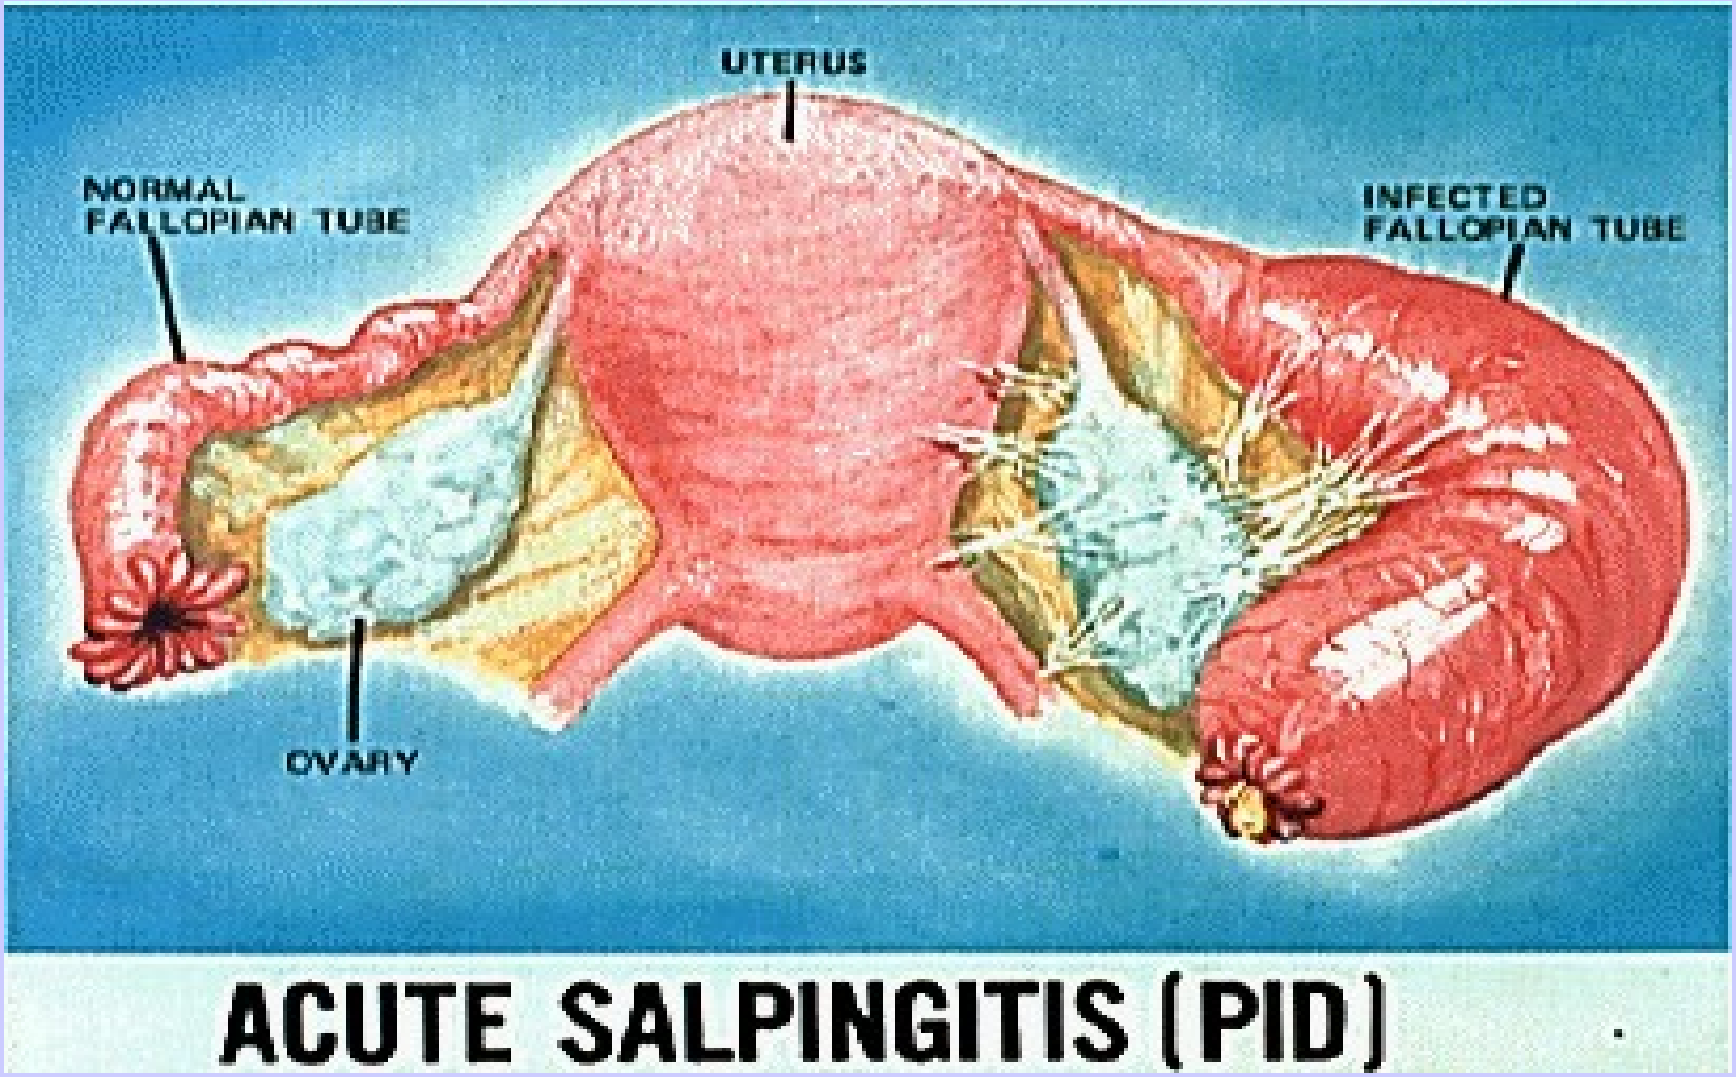
- Some women report no signs or symptoms at all.

BACTERIAL VAGINOSIS

Pelvic Inflammatory Disease

- Pelvic Inflammatory Disease (PID) is a progressive infection and inflammation.
- Can result in substantial damage to a woman's reproductive system.
- Many different organisms can cause Pelvic Inflammatory Disease.
- Most cases are usually caused by the bacteria Gonorhea and Chlamydia.
- Both may occur together

Pelvic Inflammatory Disease



SAFETY TIPS

Abstinence from sex or use condoms
